

Montgomery County SVI Maps

Social Vulnerability Index 2010

Montgomery County, Illinois

PART 1

Overall Social Vulnerability¹

Social vulnerability refers to a community's capacity to prepare for and respond to the stress of hazardous events ranging from natural disasters, such as tornadoes or disease outbreaks, to human-caused threats, such as toxic chemical spills. The **Social Vulnerability Index (SVI 2010)⁴ County Map** depicts the social vulnerability of communities, at census tract level, within a specified county. SVI 2010 groups **fourteen census-derived factors** into **four themes** that summarize the extent to

which the area is socially vulnerable to disaster. The factors include economic data as well as data regarding education, family characteristics, housing, language ability, ethnicity, and vehicle access. Overall Social Vulnerability combines all the variables to provide a comprehensive assessment.

Heat Illness in Montgomery County, Illinois

Data from IDPH show that between 1987 and 2014, 28 people in Montgomery County were hospitalized for heat illness. The population of Montgomery County was 30,104 in the 2010 census. The rate of hospitalization for heat illness in Montgomery County is 3.26. This is 32% greater than the rate of Cook County, where the devastating 1995 Chicago heat wave occurred in which over 700 people died.

The known risk factors for dying of heat stroke include living alone, lack of air conditioning, being elderly, and having chronic medical and psychiatric conditions. Doing strenuous work outdoors in the heat also puts people at risk for potentially fatal heat illness.
